

We meet a lot of people every day and most of the time we want to keep in touch with them to contact them later in the future, but every person nowadays has a lot of channels to be contacted through, you may save 1 channel or connect with the person on one platform and then they may change it in the future, leaving you with no way to contact them, OR you may meet someone and want to share with them all of the platforms and social medias account that you use so you can both follow each other, but with so many platforms nowadays, that would take much time from each of the users to share all of their platform account with the other person OR sometimes you simply want to know more about the person you're talking to.

Our app is intended to solve these problems by providing an app where each user has an account full of details about them, such as but not limited to:

- # Name
- # Small brief about the user:
- # From:
- # Living in:
- # Phone number/s:
- # Whatsapp:
- # Facebook:
- # Twitter:
- # Intstagram:
- # Snapchat:
- # E-mail:
- # Line:
- # Telegram:
- # Skype:

As each user has an account now, they can start connecting with other users, by providing their IDs to the other users, allowing them to find them by **searching**, or to scan their QR code and connect directly with them.

Our goal is to connect everyone and to make connecting with other people as simple as possible, as users would need only to share 1 account with other people, and then they would be able to find everything they want to know about the user in the app, and to ensure that everyone can stay connected forever, as when a user changes an information or 1 account details in their profile, their friends would know about it.
